R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```
summary(cars)
```

speed		dist	
Min.	: 4.0	Min.	: 2.00
1st Qu.	:12.0	1st Qu.	: 26.00
Median	:15.0	Median	: 36.00
Mean	:15.4	Mean	: 42.98
3rd Qu.	:19.0	3rd Qu.	: 56.00
Max.	:25.0	Max.	:120.00

Including Plots

You can also embed plots, for example:

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.

Removing pound signs from code output via setup chunk

Include `comment = NA` in the setup chunk to get rid of these.

Add table of contents

With `toc: TRUE` in YAML header.

`##`Change the document margins via geometry: setting in the YAML header, setting the margins overall or just some of the margins

Make URL links visible

change the url color using the `urlcolor:` option in the YAML header

Using eval and echo

```
library(dplyr)
```

```
mtcars %>%
  group_by(cyl) %>%
  summarise(mdisp = mean(displacement) )
```

cyl	mdisp
4	105.1364
6	183.3143
8	353.1000

Holding figures to end of chunk with `fig.show`

```
plot(cars)
```

```
plot(pressure)
```

```
plot(cars)  
plot(pressure)
```
